PROFILE

I am a Software Engineering student skilled in Data Science, Generative Ai, REST APIs and MERN. I've developed Code to doc generator , text to voice convertor, Virtual Assistant, Deep Fake Audio Detection System E-commerce Platform, Freelancing Platform, showcasing my expertise in full-stack development, security, Generative Ai and Data Science.

Experience

National University of computer and Emerging Sciences | *Teaching Assistant Software Project Management* | January 2026– onward

Nexium Intern | Remote | 21 June 2025 to 2nd August | **Web Developer**

IPS Technologies | Intern | Remote | July 2025 – September 2025 | **Software Engineer**

PROJECTS

Fashion Spot

A modern e-commerce platform for fashion enthusiasts.

Features include secure user authentication, intuitive product browsing, and a responsive frontend for a seamless shopping experience.

Tech Stack: React, Node.js, Express, MongoDB Atlas, JavaScript, microservices, Context API, JWT, Api Gateways, Redis.

Course Registration Platform

A web-based application built with the MERN stack to streamline university course enrollment.

Features include student registration, course management, seat allocation, and administrative controls for an efficient academic experience.

Tech Stack: Node.js, Express, MongoDB , JavaScript, HTML,CSS

Virtual Assistant

A virtual assistant leveraging natural language processing to enable voice-controlled interactions, designed to enhance user productivity and accessibility.

Our assistant can perform various tasks such as:

- fetching weather updates
- playing music
- searching Wikipedia
- telling jokes
- even sending emails

Tech Stack: python libraries like geocoder, pyjokes, speech_recognition

Medical RAG Assistant

A Retrieval-Augmented Generation (RAG) based medical assistant designed to answer healthcare-related questions using trusted medical knowledge sources.

The assistant can perform tasks such as:

- retrieving relevant medical information from knowledge bases
- answering symptom- and treatment-related queries (informational only)

Tech Stack: Python, Large Language Models (LLMs), RAG, Embeddings, Vector Database, Streamlit-based interface for real-time question answering.

Kitchen AI – Recipe Generation

Fine-tuned a **GPT-2 language model** on thousands of recipes to generate coherent, context-aware cooking instructions. Enabled prompt-based generation using ingredients or dish names, producing step-by-step recipes. Built an interactive **Streamlit web app** for real-time text generation.

Deployed: <https://kitchen-ai.streamlit.app/>

Tech Stack: Python, PyTorch, Hugging Face Transformers, Streamlit

Food Classification using Vision Transformers (ViT)

Fine-tuned a **pre-trained Vision Transformer (vit-base-patch16-224)** on the Food-101 dataset (101 classes). Applied **transfer learning**, replacing the classification head while leveraging ImageNet pretraining. Used **mixed precision (FP16)** and **gradient accumulation** to train efficiently with limited GPU resources.

Deployed <https://vit-food-classifier.streamlit.app/>

Tech Stack: PyTorch, Hugging Face Transformers & Datasets, Streamlit

SKILLS

• Data Science	• GenAi	• REST APIs
• Github	• Node	• Mongo DB
• SQL	• Docker	• Micro Services
• CSS	• JavaScript	• React

EDUCATION

BS (SE)	2022 – 2026 FAST NUCES (Continued)	
FSC(Pre-Engineering) Punjab College Gojra		2020 – 2022
Marks: 930/1100		
Matric		2018 – 2020
Divisional Model College Gojra		
Marks: 1009/1100
